

VERSIPANEL

Non Combustible FC Décor Panels

COLE

At Gen-Eco, we are continually providing solutions to our customers and one area that is expanding is for external applications.

With the changes to fire regulations, the combination of digital imagery on fibre cement is offering architects alternatives where products like plywood are no longer suitable for soffit lining in shopping centres and schools.

A non-combustible alternative.

As the name suggests, **Versipanel** is a very versatile panel. Available in a range of sizes and styles to suit Soffit, Wall and Ceiling cladding .

Classed as NON COMBUSTIBLE, giving your certainty that you are meeting the new and more stringent BCC fire regulations.

Produced in Brisbane but distributed nationally with quick production and delivered to site READY to install.

The panels can be coated with standard UV protection plus UV & Anti-Graffiti for low areas that may be subject to malicious damage.

Karalee Shopping Centre QLD: Builder Hutchinson Builders

Product : Versipanel Hoop Pine imagery on FC

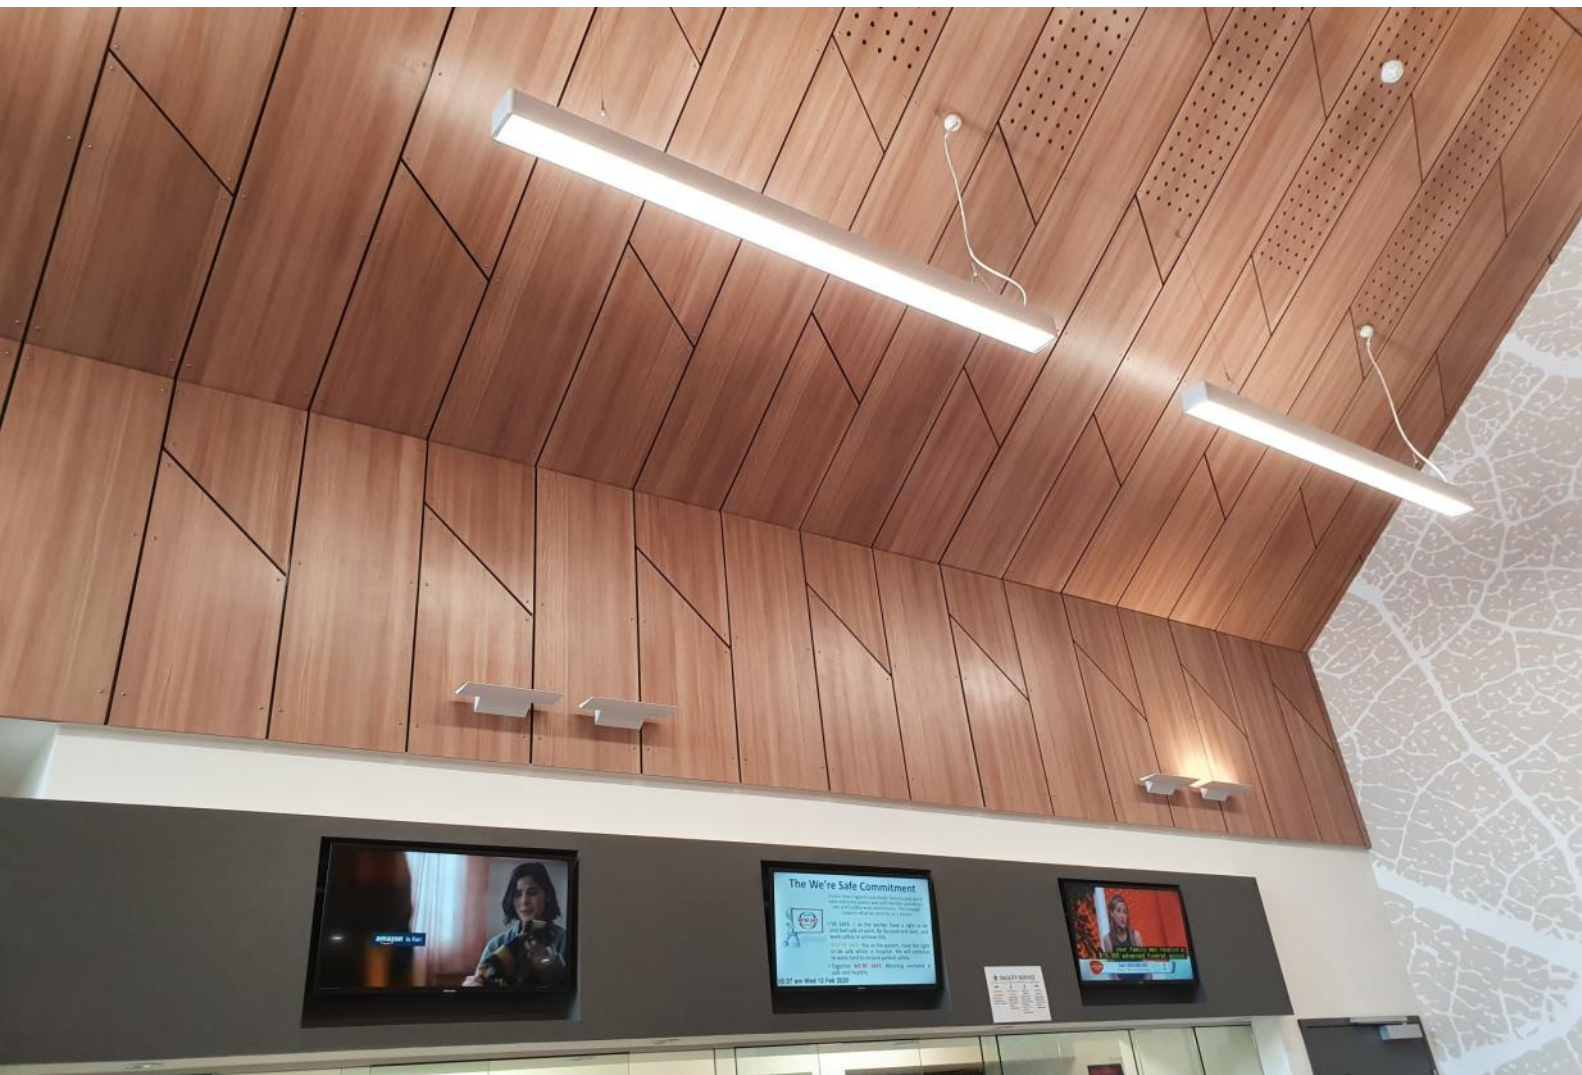

Pottsville High School - NSW Architect: Conrad & Gargett Installer: Ideal Commercial Linings

Product: Versipanel Hoop Pine imagery CFC panels
